

Alert number

[A12/00095/20](#)

Product

Tattoo ink

Risk type

Chemical

The product contains the aromatic amines 3,3'-dichlorobenzidine 3,3'-dichlorobiphenyl-4,4'-ylenediamine and o-toluidine (measured values: 35 mg/kg and 34 mg/kg, respectively).

These aromatic amines may cause cancer and dichlorobenzidine is also a skin sensitizer and could trigger allergic reactions. The Council of Europe Resolution ResAP (2008)¹ on requirements and criteria for the safety of tattoos and permanent make-up, recommends that aromatic amines with carcinogenic mutagenic, reprotoxic or sensitising properties should neither be present in tattoos and permanent make-up products nor released from azo-colourants.
